### **DETAILED ACTION**

1. This office action is in response to communication filed on 11/2/2009.
2. Claims 1-52, 54-69, 71-96, 98-115, 117-142, 144-159, 164-166, 168-170, 179-180, 182, 185-187, 189-190, 194-195, 197, 205-206, 209-210 are presented for examination.

### **Allowable Subject Matter**

The present invention is directed to methods and systems for considering client and financial data, determines whether to offer a product for a specific entity, outputs an offer for the determined product, and then moves on to the next client, these steps are performed without input from an agent.

3. The closest prior art are:

Ryan et al.(5,655,085) discloses Ryan discloses a method wherein a computerized system assists in illustrating a life insurance policy and then electronically completing an application form. This method is still firmly rooted in the one-on-one selling paradigm of insurance policies, where an insurance agent sits down with a client and conducts an interview to gather the information needed or manually inputs information provided to the agent in a questionnaire. Ryan removes the need for the insurance agent to go to many different insurance companies to request quotes... [and] conduct lengthy and time-consuming analyses to establish which was the best product for the customer.

Frenkel (EP 0 572 828 A1) teaches requiring some kind of human intervention in order to get individual client records into a computer so that they can be processed to generate recommended types of investments.

"The New Age of Financial Services Marketing: A Hands-on Applications Guide to Harnessing the Power of Database Marketing", edited by Arthur Holtman et al. teaches determining if a customer in a database should receive a preexisting offer for a product.

Independent claims 1, 64, 159, 182 and 197 identify the uniquely distinct feature of **“automatically inputting into the one or more associated databases a plurality of client records without human intervention between input of the respective client records, the client records comprising client data on specific entities;..... using an output module associated with the processor and configured to use at least one automated process to automatically compose the variable information comprising the parts determined to create the communication for each said specific entity such that at least one portion within the communication accommodates the variable information, wherein said variable information for each specific entity comprises at least partially a customized identification, specification and/or promotion of said financial product or said financial service or both wherein said variable information for each specific entity has at least some data that is different and automatically generating each of the plurality of communications without human intervention between the generation of each communication for each specific entity”**

Art Unit: 3688

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
